

***Comments about the remarks that were not exactly followed, or deserve a comment:***

Page 3

How about a general statement at the beginning, along the lines of "DORIS is a system of ground-based transmitting antennas and satellite-borne receivers that yields precise station positions applicable to reference frame determination and other geodetic applications."

***See new, introductory paragraph.***

page 4

2.1 Site selection criteria ("Sites selection" is awkward)

***This wording is OK for the 5 other reviewers, so I left it as is.***

How about a reference for "A DOMES number"?

***See added text***

page 10

"clear sky view required only one tower section"

***See the new wording, which is a compromise between suggestions from various reviewers***

page 21

A word missing right at the top? ("creating spurious 'something' in the signal")... perhaps spurious noise?

***No, "spurious" is a noun in the RF context***

page 24

"The first approach will be described here in detail. It consists of assessing..."

***My Robert & Collins says:***

***"consist of" = be composed of***

***"consist in...doing sth"***

***So it seems that "in" should be used in this case, as confirmed by the 5 other reviewers who were happy with "in".***

page 25

"amount of an antenna movement"

***See the new wording, which is a compromise between suggestions from various reviewers***

page 26

"consisted in measuring" -> "consisted of measuring"

***No, "in" (see above)***

Figure 20-22 Is lettering clarity sufficient for final publication?

***It looks OK when printed on an A4 page, but will be checked with the editor at the final stage before publication***
